## Calix CVH now with 19-mm connector

**The Calix CVH\* in the 16 mm-configuration is now being complemented with a heater with a 19-mm connector, which is common in many new vehicles.**

The Calix CVH is a self-adjusting heater that gradually reduces power as the temperature of the anti-freeze solution rises. This enables the Calix CVH to save energy compared to traditional engine heaters that always run at full power when connected.

Output for the Calix CVH is at 500 W, but can be increased to 750 W with a Calix circulation pump. CVH is like other Calix products S-marked and fully integrated with the rest of the Calix product line.

*\*Continuously Variable Heater*

Product	Part no.	Available
