BC1230XC (12V/30A)

New high performance battery chargers from Calix

Calix is expanding its product line with two new chargers for professional use, featuring high power efficiency and heavy duty enclosures.

The new chargers are perfect for vehicles and applications that require high currents and continuous charging, such as ambulances, forklifts and leisure boats. Both chargers are compact, designed for lead acid batteries and easy to install.

The new BC1230 and BC1230 XC (with by pass connection for 230V) chargers are fully sealed, preventing the entry of water, oil and other substances. With internal electronics providing both reverse polarity and overcurrent protection, the chargers do not require external fuses.

The chargers can also handle parallel loads – powering devices such as lamps and radios, while charging batteries at the same time.

Temperature regulation

The chargers are equipped with a temperature sensor that is integrated into the minus cable (black). The sensor optimises charging at different temperatures. If the surface of the charger's aluminium enclosure exceeds 65°C, integrated overheating protection automatically limits the charge to the battery.

BC1230: Battery charger – 12 volts, 30 amps

Product	Part no.	Available
BC1230	1753931	October 2013
BC1230 XC	1753932	October 2013
